

Another difference between Colorlight and Novastar is that the ports are reverse

In **Novastar port 1** is on the **LEFT** looking from behind and **Colorlight port 1** is on the **Right**

For LED CARD setup , please connect the square USB connector to the LED sending card and the other side to the computer

To install the sending card into a Video Processor first take out the plate removing the 2 round screws in the DVI connector .

Then remove the Card Holder and place it , then secure with the 2 round standoff and connect the power cable.

TIP : Did you know you can test the card without the Video processor just connecting a HDMI-DVI connector directly .

Colorlight and Novastar looks similar but the difference is in the Audio "BLUE" connector that is in the **Colorlight card**.
